Listing of Claims:

1. (Currently Amended) An elastomer-modified epoxy siloxane composition comprising:

water;

an alkoxy or silanol-functional silicone intermediate;

an amine curative agent selected from the group consisting of amino-functional compounds and aminofunctional silicone compounds;

an epoxy resin; and

an elastomeric resinous intermediate <u>having a functionality selected from the group</u> consisting of hydroxyl, epoxy, isocyanate, carboxyl, mercaptan, and amine.

- 2. (Previously Presented) The elastomer-modified epoxy siloxane composition as recited in claim 1 wherein the amine curative agent is an aminosilane.
- 3. (Currently Amended) The elastomer-modified epoxy siloxane composition as recited in claim 1 additionally comprising at least one <u>organometallic</u> metal catalyst to facilitate cure at ambient temperature.
- 4. (Original) The elastomer-modified epoxy siloxane composition as recited in claim 1 wherein the elastomeric resinous intermediate is selected from the group consisting of epoxy resins, polybutene resins, polybutadiene resins, acrylonitrile resins, polysulfide resins, and combinations thereof.
- 5. (Previously Presented) The elastomer-modified epoxy siloxane composition as recited in claim 1 wherein the silicone intermediate has a weight-average molecular weight of from 400 to 10,000.
- 6. (Original) The elastomer-modified epoxy siloxane composition as recited in claim 1 wherein the epoxy resin ingredient is selected from the group consisting of

-2-

LA 4086603 v1

epichlorohydrin-bisphenol A epoxy resins, epochlorohydrin bisphenol F epoxy resins, hydrogenated bisphenol A epichlorohydrin epoxy resins, glycidyl methacrylate resins, glycidyl esters, phenol novalac epoxy resins, resorcinol-modified epoxy resins, and combinations thereof.

7. (Previously Presented) An elastomer-modified epoxy siloxane composition prepared by combining:

water;

a silicone intermediate selected from the group consisting of alkoxy and silanolfunctional polysiloxanes;

an aminosilane;

an epoxy resin having at least two 1,2-cpoxide groups; and

an elastomeric resinous intermediate having a functionality selected from the group consisting of hydroxyl, epoxy, isocyanate, carboxyl, mercaptan, and amine.

8. (Original) The elastomer-modified epoxy siloxane composition as recited in claim 7 wherein the silicone intermediate has the formula

$$R_{2} = \begin{bmatrix} R_{1} \\ | \\ Si - O \end{bmatrix}_{n}$$

where each R₁ is selected from the group consisting of hydroxy, alkyl, aryl and alkoxy groups having up to six carbon atoms, each R₂ is selected from the group consisting of hydrogen, alkyl, and aryl groups having up to six carbon atoms.

LA 4086603 VI

- 9. (Original) The elastomer-modified epoxy siloxane composition as recited in claim 7 wherein the epoxy resin ingredient is selected from the group consisting of epichlorohydrin-bisphenol A epoxy resins, epochlorohydrin bisphenol F epoxy resins, hydrogenated bisphenol A epichlorohydrin epoxy resins, glycidyl methacrylate resins, glycidyl esters, phenol novalac epoxy resins, resorcinol-modified epoxy resins, and combinations thereof.
- 10. (Original) The elastomer-modified epoxy siloxane composition as recited in claim 7 additionally comprising at least one metal catalyst to facilitate cure at ambient temperature, wherein the catalyst is selected from the group consisting of zinc, manganese, zirconium, titanium, cobalt, iron, lead, and tin each in the form of octonates, neodecanates, or naphthanates.
- 11. (Previously Presented) The elastomer-modified epoxy siloxane composition as recited in claim 7 comprising in the range of from about 1 to 40 percent by weight siliconc intermediate, 1 to 15 percent by weight aminosilane, 5 to 60 percent by weight cpoxy resin, and 1 to 25 percent by weight elastomeric resinous intermediate.
- 12. (Currently Amended) An elastomer-modified epoxy siloxane composition prepared by combining in the presence of water:

a silicone intermediate having the formula

$$R_2$$
 $Si - O$ R_2 R_1

where each R_1 is selected from the group consisting of hydroxy, alkyl, aryl and alkoxy groups having up to six carbon atoms, each R_2 is selected from the group consisting of hydrogen, alkyl, and aryl groups having up to six carbon atoms and, wherein n is selected so that the weight-average molecular weight for the polysiloxane is in the range of from about 400 to 10,000;

an aminosilane;

an epoxy resin having an epoxide equivalent weight in the range of from 100 to about 5,000; and

an elastomeric resinous intermediate <u>having a functionality selected from the group consisting of hydroxyl, epoxy, isocyanate, carboxyl, mercaptan, and amine.</u>

- 13. (Currently Amended) The elastomer-modified epoxy siloxane composition as recited in claim 12 additionally comprising at least one <u>organometallic</u> metal catalyst to facilitate cure at ambient temperature.
- 14. (Previously Presented) The elastomer-modified epoxy siloxane composition as recited in claim 12 comprising from about 0.7 to 1.2 aminc equivalent weight per epoxide equivalent weight.
- 15. (Previously Presented) The elastomer-modified epoxy siloxane composition as recited in claim 12 comprising in the range of from about 1 to 40 percent by weight silicone intermediate, 1 to 15 percent by weight aminosilane, 5 to 60 percent by weight epoxy resin, and 1 to 25 percent by weight elastomeric resinous intermediate.
 - 16. (Canceled)
 - 17. (Canceled)

- 18. (Currently Amended) The elastomer-modified epoxy siloxane composition as recited in claim 1 wherein the clastomer-modified epoxy siloxane composition in its cured form forms exists as a uniformly dispersed arrangement of linear epoxy chain fragments that are cross-linked with a continuous polysiloxane chain.
- 19. (Previously Presented) The elastomer-modified epoxy siloxane composition as recited in claim 1 wherein the amine curative agent is an aminosilane that includes at least two active hydrogens, and the cpoxy resin has more than one 1,2-epoxide groups per molecule.
- 20. (Previously Presented) The elastomer-modified epoxy siloxane composition as recited in claim 1 comprising from about 0.7 to 1.2 amine equivalent weight per epoxide equivalent weight.
- 21. (Currently Amended) The elastomer-modified epoxy siloxane composition as recited in claim 12 wherein the elastomer-modified epoxy siloxane composition in its cured form forms exists as a uniformly dispersed arrangement of linear epoxy chain fragments that are cross-linked with a continuous polysiloxane chain.
- 22. (Previously Presented) The elastomer-modified epoxy siloxane composition as recited in claim 12 wherein the aminosilane includes at least two active hydrogens, and the epoxy resin has more than one 1,2-epoxide groups per molecule.
- 23. (New) An elastomer-modified epoxy siloxane composition prepared by combining the contents of:
- a first container comprising an epoxy resin, an alkoxy- or silanol-functional silicone intermediate, and a reactive elastomeric resinous intermediate having a functionality selected from the group consisting of hydroxyl, epoxy, isocyanate, carboxyl, mercaptan, and amine; with

a second container comprising an amine ingredient selected from the group consisting

LA 4086603 vI

of amino-functional compounds and aminofunctional silicone compounds.
